ALHO Space Factory – at home with modular building

- Production site
- Sales agency
- Rental park

ALHO – Buildings from the space factory

Building systems as an idea. This has paved the way for the success of the company very early. In 1967 ALHO started the industrial production of prefabricated buildings. The first space modules in steel frame design followed in 1971.

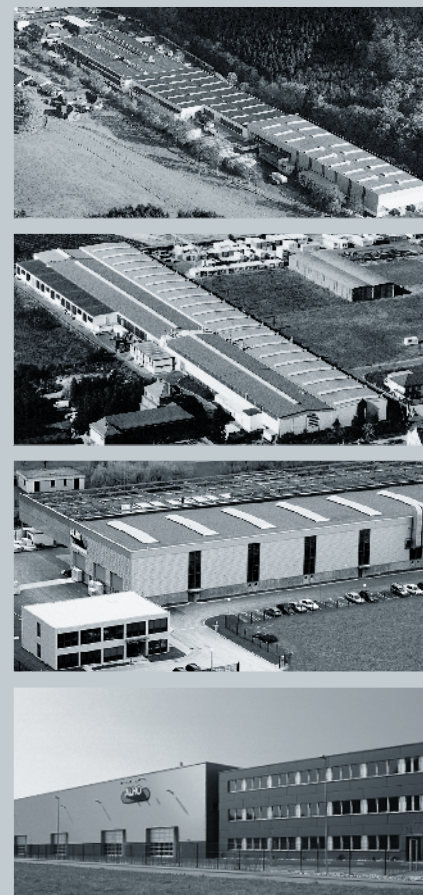

The concept of system building was the foundation and driver for the continual development and systematic growth of the ALHO group. Today, space modules, which were prefabricated under optimal industrial conditions, are the foundation for individual buildings. E.g.

- § Office and administration buildings
- § Kindergartens
- § Schools
- § Leisure facilities
- § Hospitals, nursing care homes and laboratories
- § Construction site accommodations

It is not without reasons that ALHO and its approx. 500 qualified staff members rank among the market leaders in the industry. The ALHO capability reaches international standards. The service also includes a rental park with more than 10,000 rental units.

Since the foundation of the company more than 200,000 system units left the 4 production plants in Germany, France and Switzerland.

The ALHO space factory continues to build – consistently and systematically.

From the planning phase to acceptance – the quick way of safe construction

Every investor in a building requires fixed terms. Something the ALHO space factory can be relied upon – no matter whether for new buildings, extensions or adding storeys. Independently of the weather, the modules are produced in the ALHO space factory and then transported and assembled on site. After only a short period for works on site, the final building is prompt handed over in a turnkey fashion – with a fixed price guarantee.

The extraordinary quality is reliable as well. Our numerous test and certification marks are impressive proofs for this.

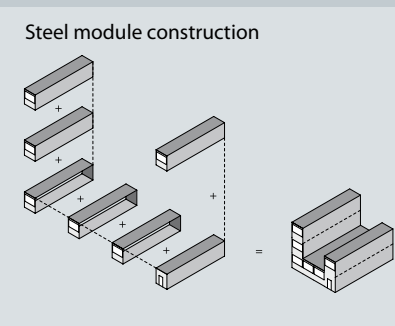

To meet all requirements, ALHO developed three construction series – Basic, Classic and

Comfort-Line to ensure that the optimal space is available for each purpose.

The system behind the building technology consists of modular individual, three dimensional steel frames which – after assembling – shape the final building.

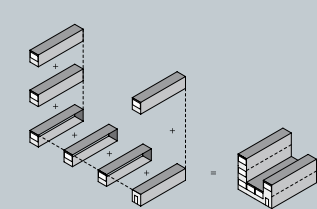

The interior of the building is completed up to 90% in the factory before the modules are assembled on site within a few days.

Three series – A range full of possibilities

Series	ALHO Basic Line	ALHO Classic Line	ALHO Comfort Line
Time of use	Temporary solution	Temporary / permanent solution	Permanent solution
Construction	Visible steel frame, dual-pane windows, walls out of profiled steel sections.	Visible steel frame, large glass-surface elements on the front, sandwich type wall in combination with dry construction systems.	Steel frame U-section behind the façade system, e.g. curtain façade of aluminium, wood, steel or glass or plaster as a compound heat insulation system.
Type of use	Construction site accommodations, construction site offices, temporary solution for reconstructions / rehabilitation measures, trade fair application, schools and kindergartens.	Solution for a medium-term application in case of reconstructions / rehabilitation measures and / or as a quickly available office building, school or kindergarten.	New construction, addition, storey addition. Ideal solution for office and administration buildings, hospitals, nursing care homes and laboratories, schools, lunchrooms and canteens etc.
Availability	Approx. 1 – 2 weeks	Approx. 6 weeks	From approx. 8 weeks
Financing	Purchase / rent / leasing	Purchase / rent / leasing	Purchase / hire purchase / leasing
Equipment	Functional	High-quality	individually
Special features	Addition in width and length as desired, max. height 3 storeys. Exchangeable wall system, quickly available, can be disassembled and re-installed quickly.	Addition in width and length as desired, max. height 3 storeys. Flexible wall system.	Addition in width and length as desired, max. height 6 storeys. Easily adaptable room structure for a possible change in usage.

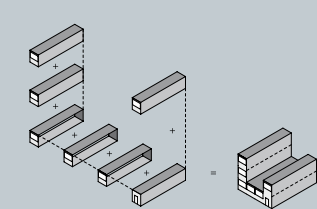

ALHO steel frame module construction – High degree of prefabrication, high efficiency

Whether you plan to build for a short-term, medium-term or long-term utilisation, whether you plan a purely functional or an additionally representative building, the three production series of standardized ALHO steel frame modules always offer you the most suitable solution.

The heavy steel frame structure of each module is the common denominator and forms the static foundation for the building. Within the type system the width, height, length and expansion standards are variable. The prefabricated modules can be assembled very quickly into rooms, storeys or buildings. If your requirements should change, additional modules can be easily added or detached. Even if you should change location, the building is so flexible that it can move along with you.

ALHO steel frame module type of construction
The modules of the ALHO Basic, Classic and Comfort Line prefabricated up to 90% can be assembled on site within a few days.
